Name: Özgür Ateş

Batch Code: LISUM16

Submission Date: 28/12/2022

Model Training:

```python
import pandas as pd
import pickle
from sklearn.model_selection import train_test_split
from sklearn.linear_model import LinearRegression
from sklearn.metrics import confusion_matrix, accuracy_score

data = pd.read_csv('student-mat.csv', sep=";")

data = data[['absences', 'G1', 'G2',
            'studytime', 'failures', 'G3']]

data.dropna()

X = data.iloc[:, :-1].values
Y = data.iloc[:, -1].values

x_train, x_test, y_train, y_test = train_test_split(
    X, Y, test_size=0.15, random_state=1)

regressor = LinearRegression()
regressor.fit(x_train, y_train)

pred = regressor.predict(x_test)

acc = regressor.score(x_test, y_test)
print(acc)
# 84% accuracy rate in the model

with open("model.pickle", "wb") as f:
    pickle.dump(regressor, f)
```

Deploying The Model On The App:

```python
website > 🐍 main.py > ...
   1    from flask import Flask, render_template, request
   2    import pandas as pd
   3    import pickle
   4
   5    app = Flask(__name__)
   6
   7    p = open("model.pickle", "rb")
   8    regressor = pickle.load(p)
   9
  10
  11    @app.route('/')
  12    def home():
  13        return render_template('index.html')
  14
  15
  16    @app.route('/predict', methods=['POST'])
  17    def predict():
  18        studytime = request.form.get("studytime")
  19        failures = request.form.get("failures")
  20        abs = request.form.get("absence")
  21        G1 = request.form.get("G1")
  22        G2 = request.form.get("G2")
  23        features = [studytime, failures, abs, G1, G2]
  24        test_df = pd.DataFrame([features], columns=[
  25                           'studytime', 'failures', 'absence', 'G1', 'G2'])
  26
  27        pred = regressor.predict(test_df)
  28
  29        return render_template('index.html', pred=pred)
  30
  31
  32    if __name__ == '__main__':
  33        app.run(debug=True)
  34
```

HTML CODE:
